

RT3PCDVR – State Of The Art Digital CCTV Performance

Windows Based easy to use powerful CCTV System !!!

Our PC based surveillance systems come as standard with windows XP, 240gb hard drive and a recording rate of 25frames per second – That means Real Time Recording!! a network card to give access to the system via an office LAN or viewed remotely over an Internet connection.

The Multicam system with built-in motion detection technology, Records only moving objects in the view port area. These video images are digitized, captured with date and time, compressed and kept on a PC's hard disk as a file for later investigation.. No more round the clock recording on videotape like conventional surveillance systems. It also allows remote viewing by Modem, TCP/IP, IP Multicast and IPX with our own remote view application or through your Internet web browser, acting just like a Web Cam.

Features

- *Motion detection, round-the-clock, or by schedule recording*
- *Send alarm/messages to communication devices when an intruder is detected by*
